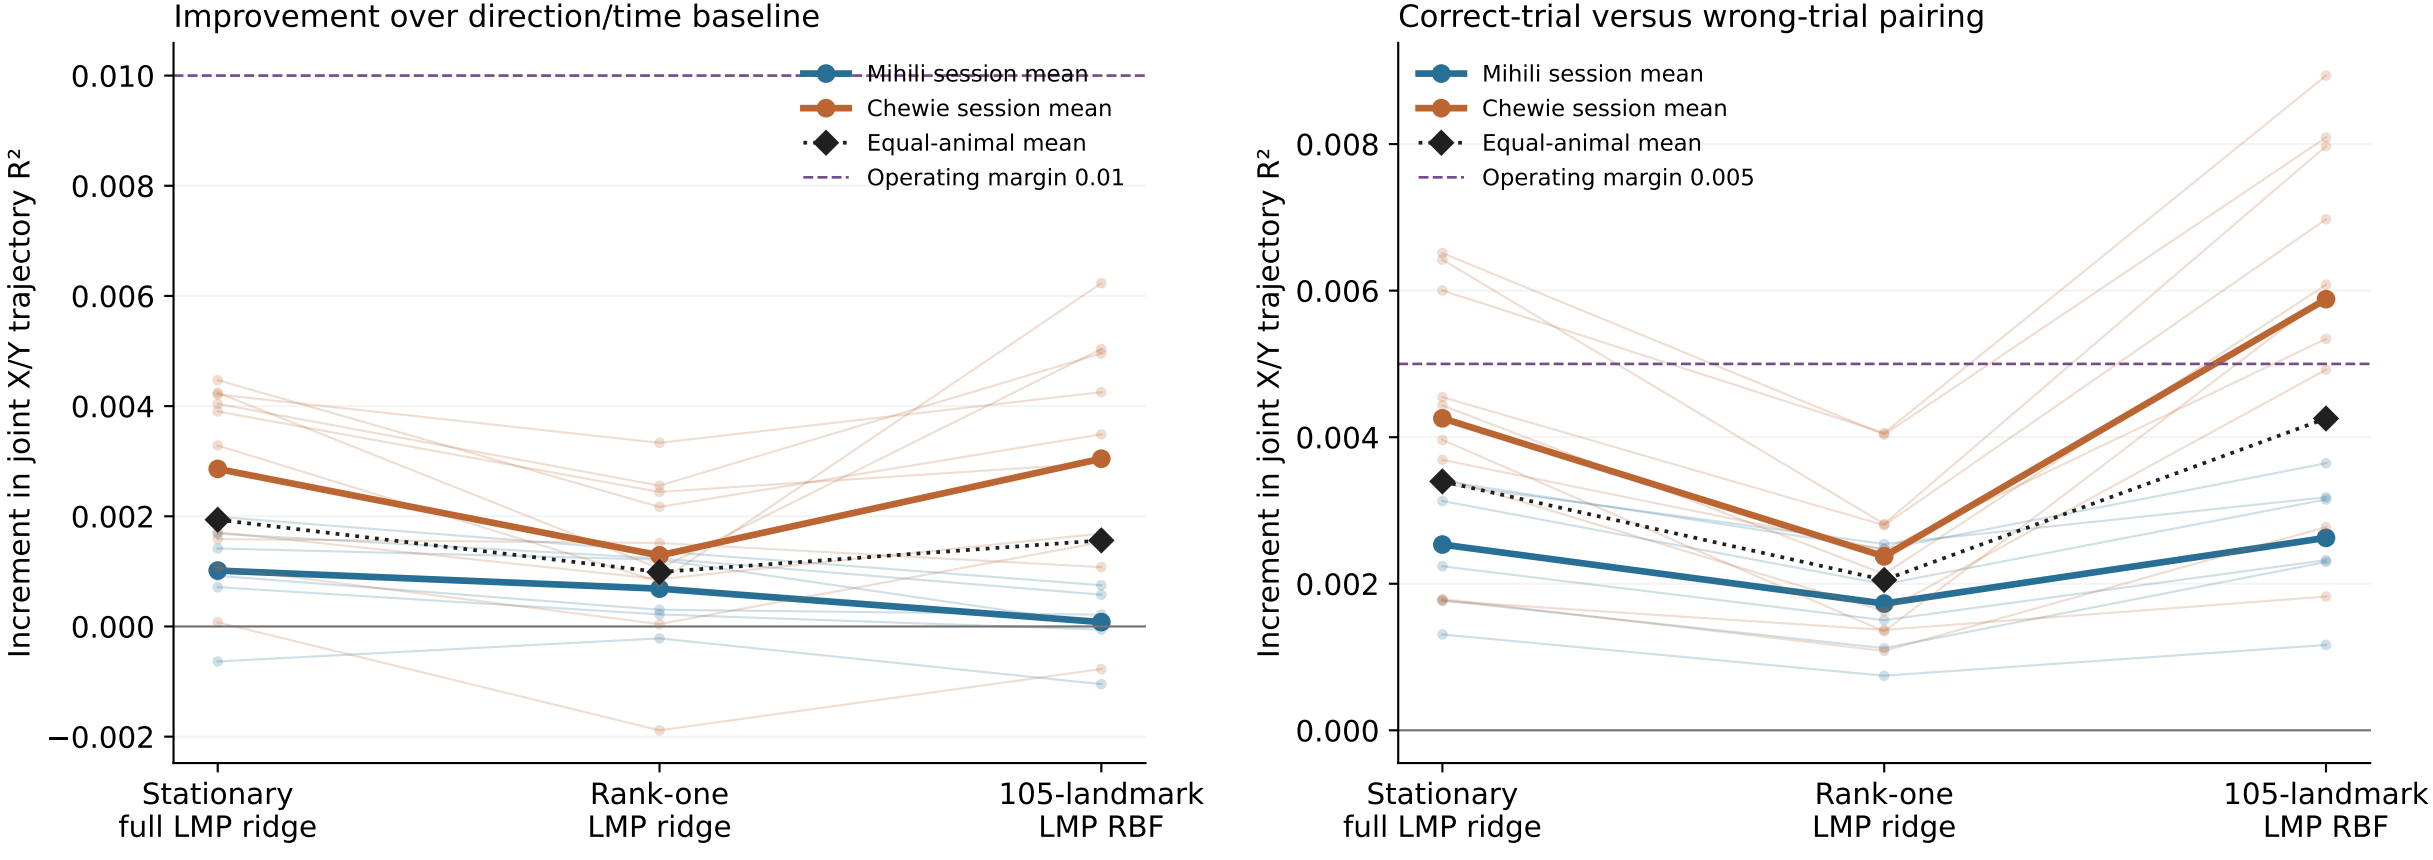
EP05 · Does changing decoder capacity clear the required gains?

Exposed development only · 16 sessions, 2 animals · unchanged channels, trials, endpoint and outer-session penalty selection



Faint lines: sessions. Solid lines: animal means. Diamonds: equal-animal mean. No confidence intervals.

All three miss both aggregate operating margins. Kernel and linear penalties are not a matched effective-capacity comparison.

Source: completed primary_capacity_summary_attempt001, including its preserved full-LMP reference. No new fits or source reads.
