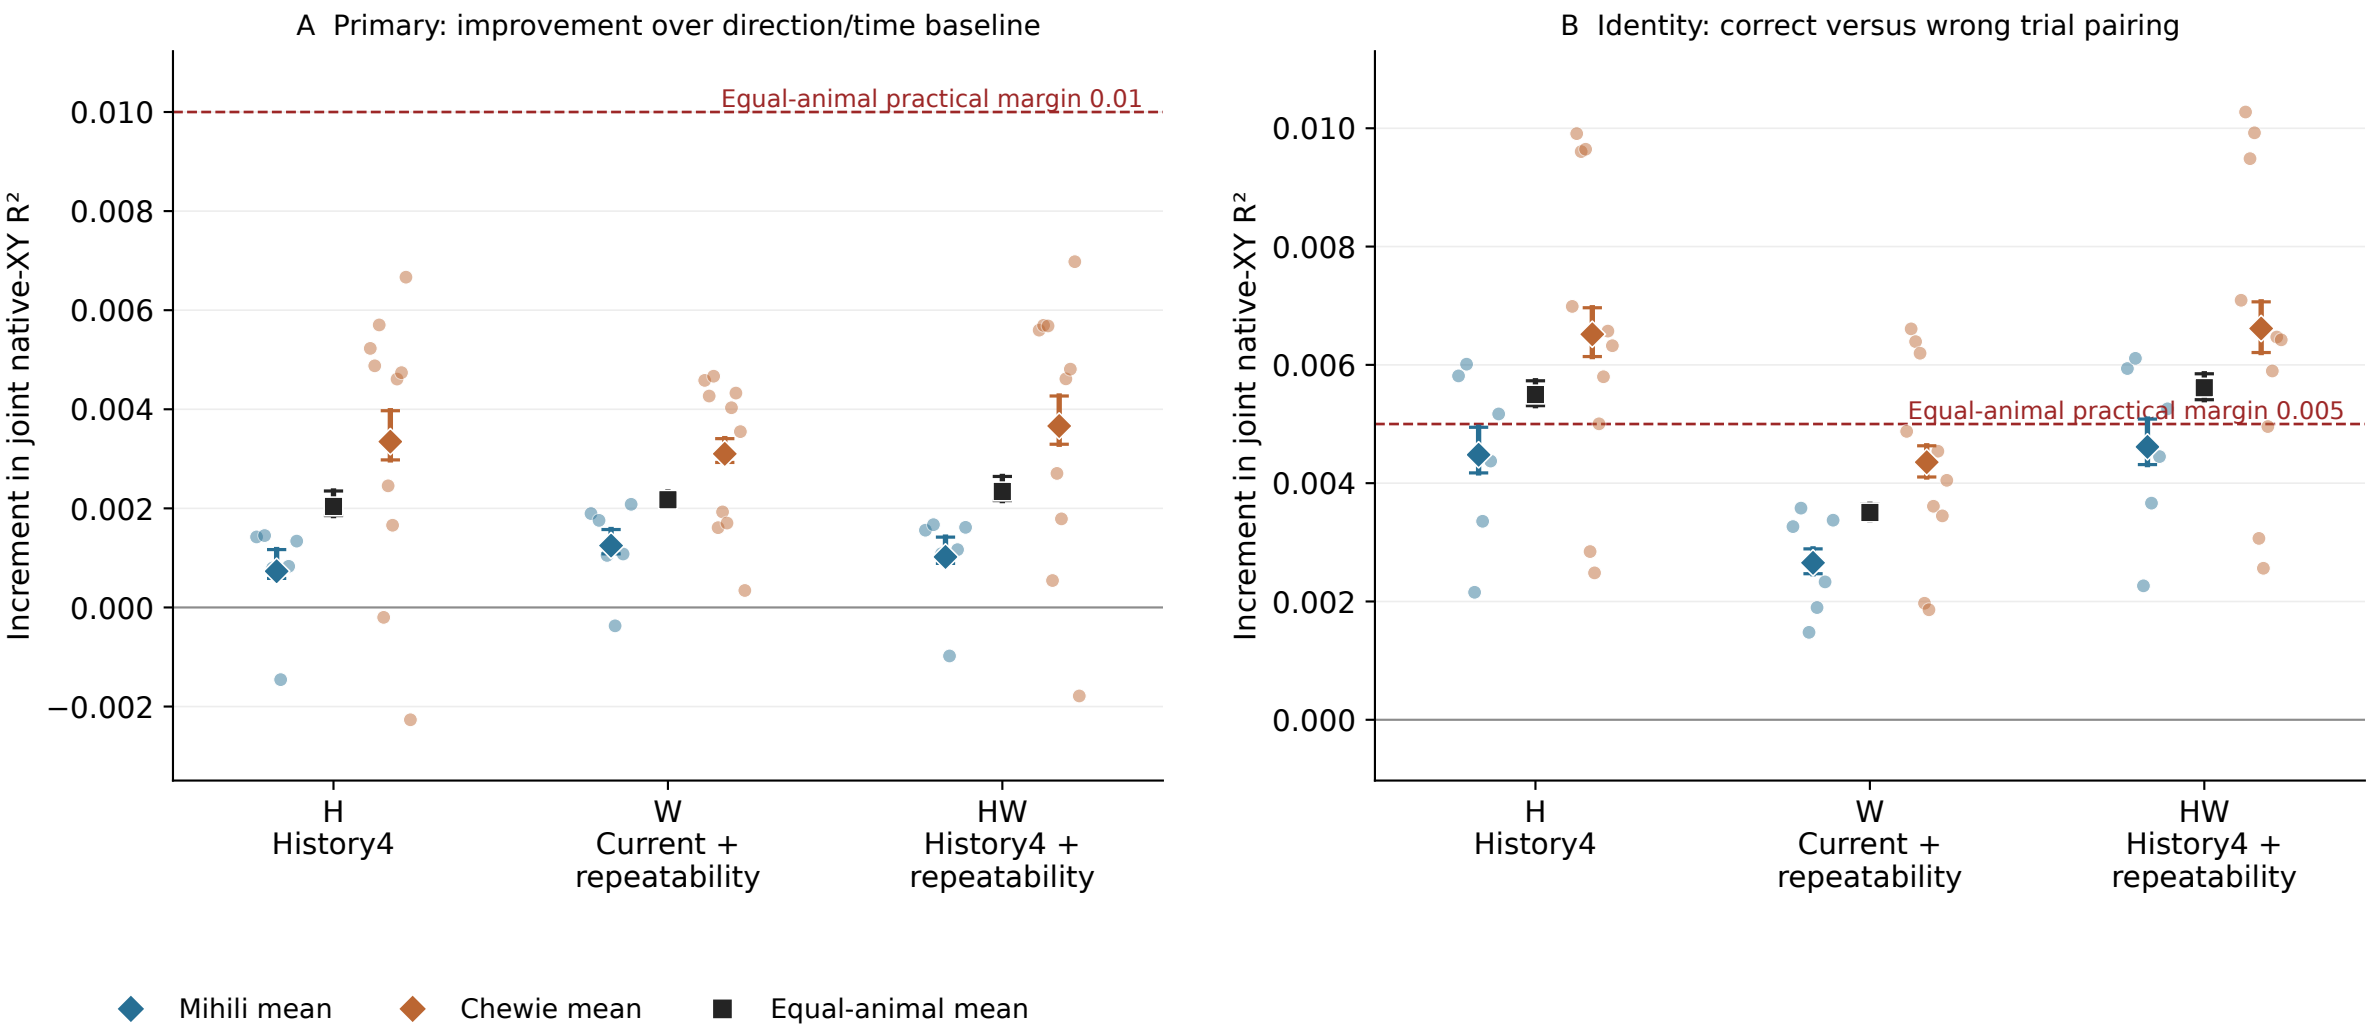
Combining fixed history and repeatability weighting

HW: primary 0.002341 — FAIL at 0.010; identity 0.005614 — PASS at 0.005



Small dots: all 16 sessions for every recipe. Bars: ranges after fixed-prediction session omissions; not confidence intervals.
Practical thresholds apply to equal-animal means; animal-specific gates require positivity. Each recipe uses its own outer-selected λ.
Exposed development data · 2 animals · no promotion or future-session confirmation.
