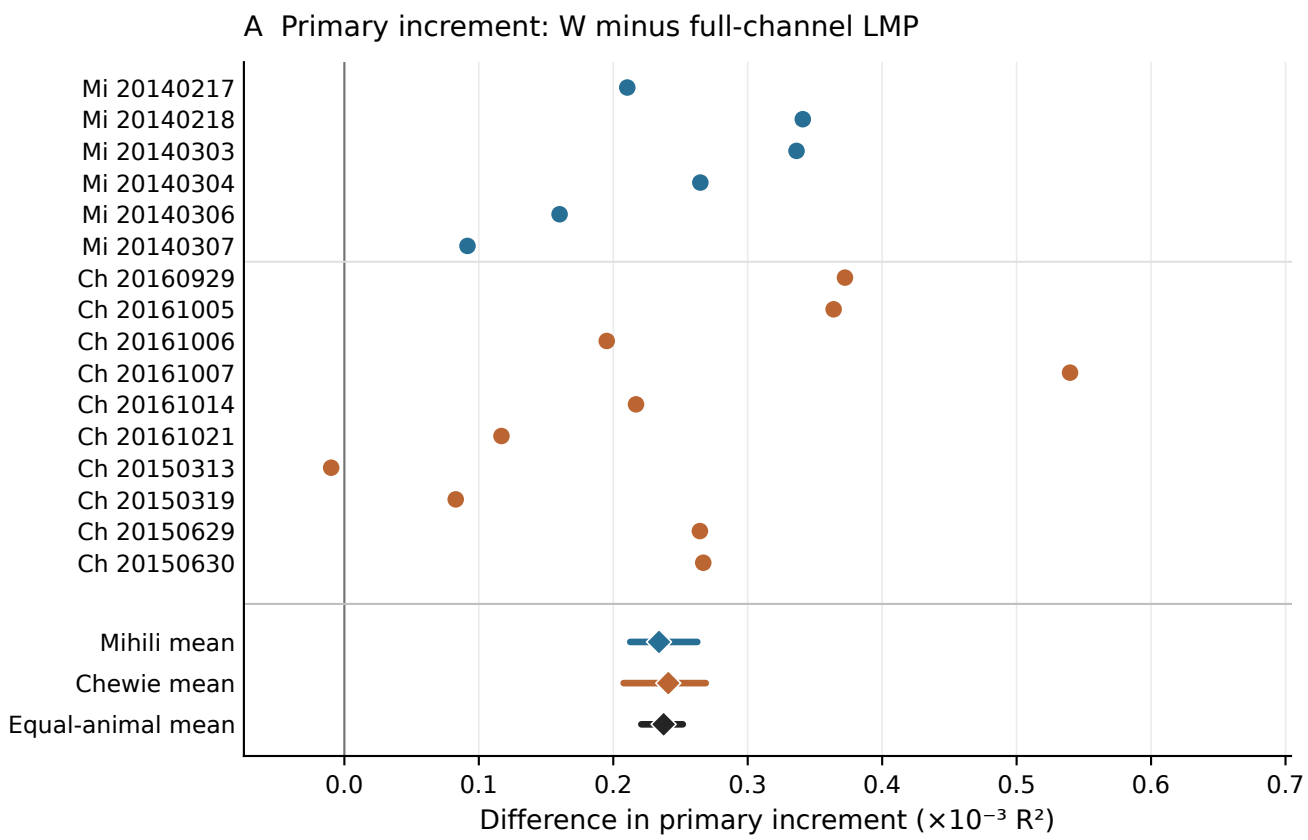
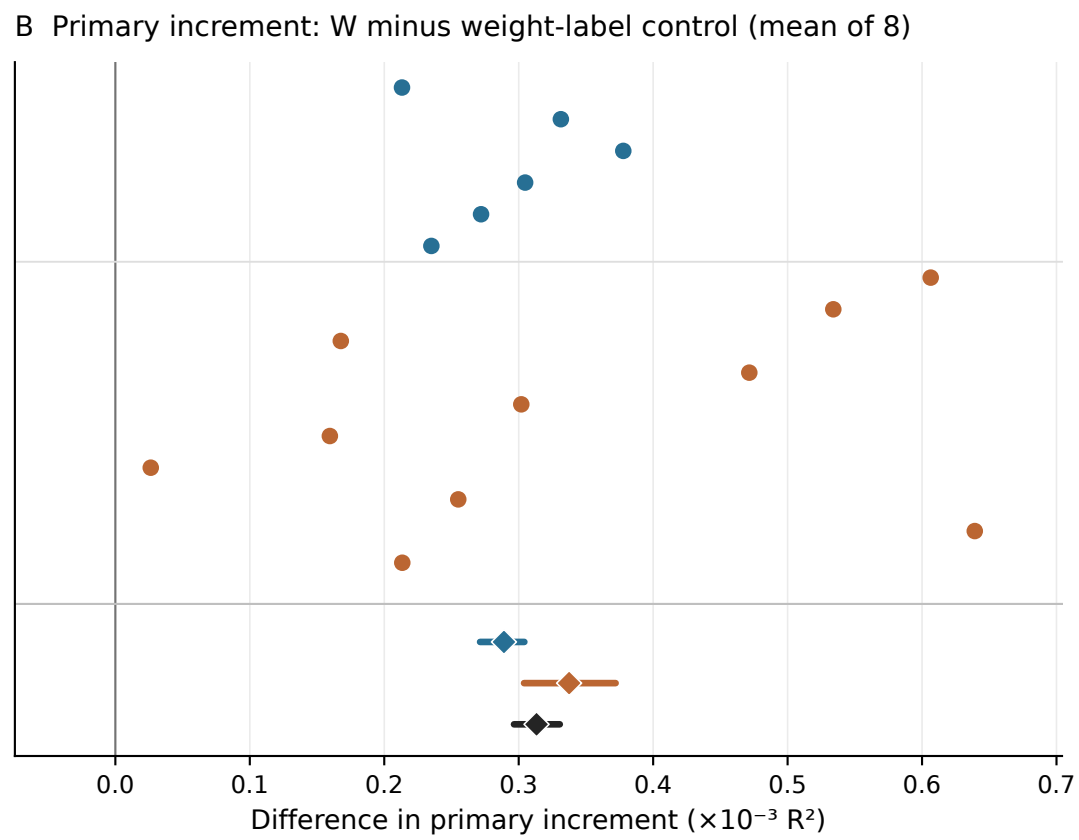
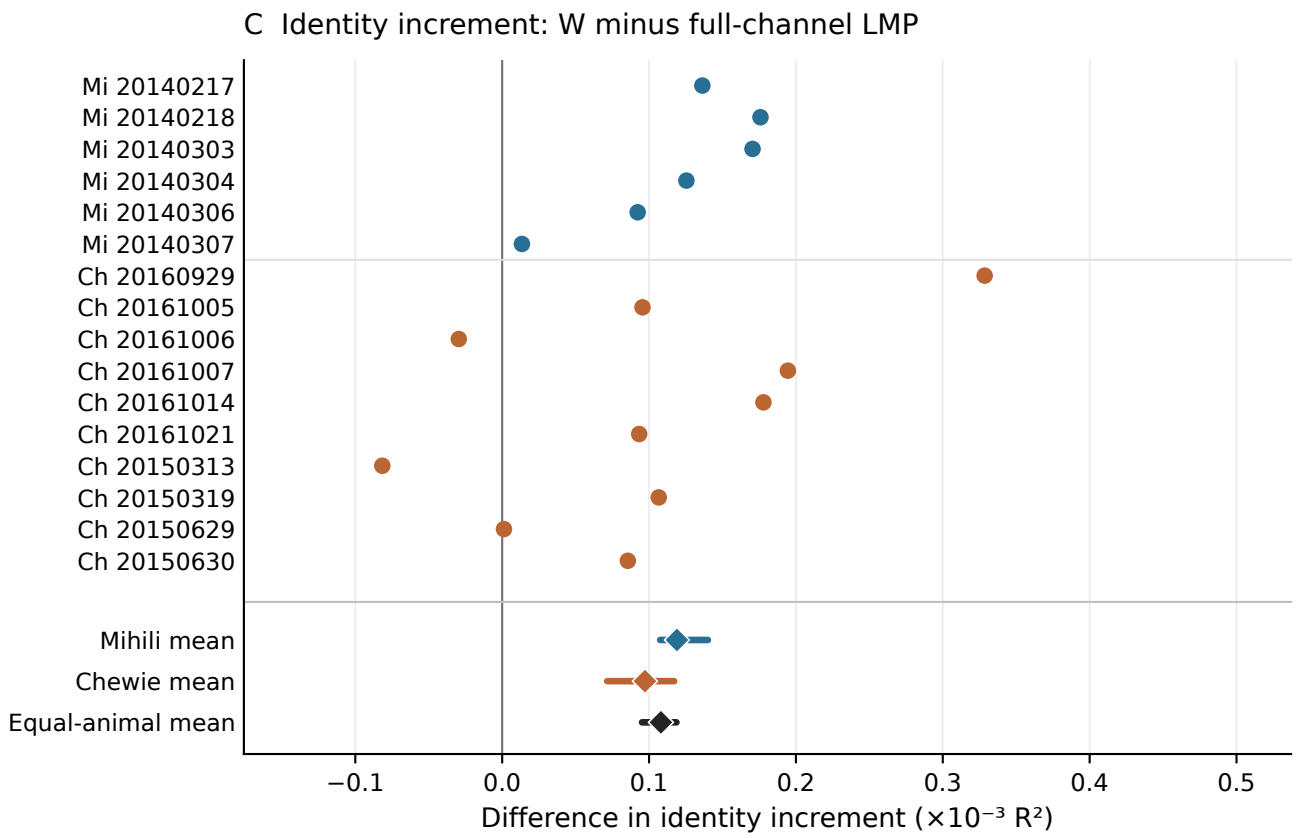
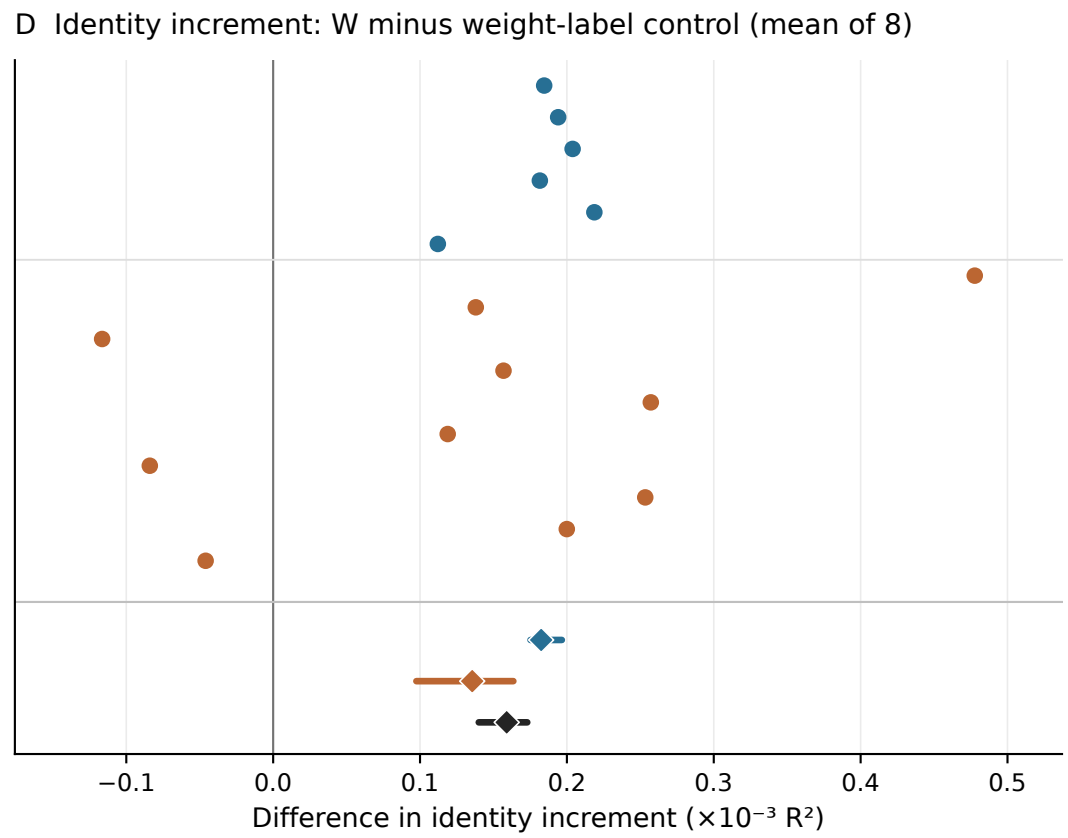
Repeatability weighting: full-cohort contrasts

Both practical gates FAIL: primary 0.002175 < 0.010; identity 0.003504 < 0.005









Mihili Chewie

Dots: all 16 sessions. Diamonds: means. Bars: ranges after each fixed-prediction session omission; not confidence intervals.
Full-LMP anchor uses its own outer-selected λ; all 8 weight-label controls use W-selected λ and averaged SSE.
Exposed development data · 2 animals · equal session weights within each animal · no promotion or new-animal test.
