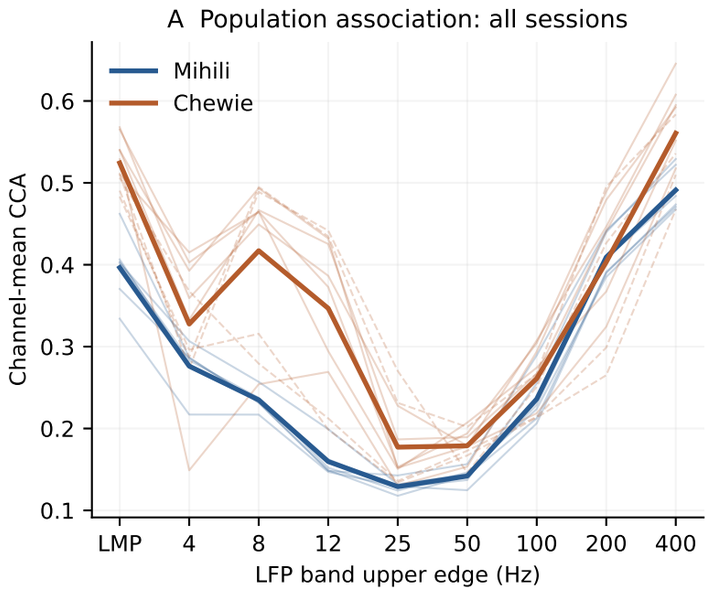
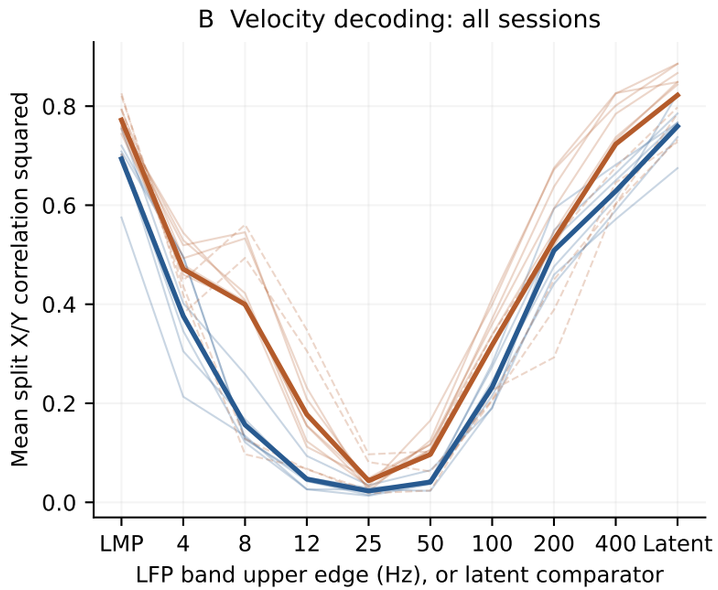
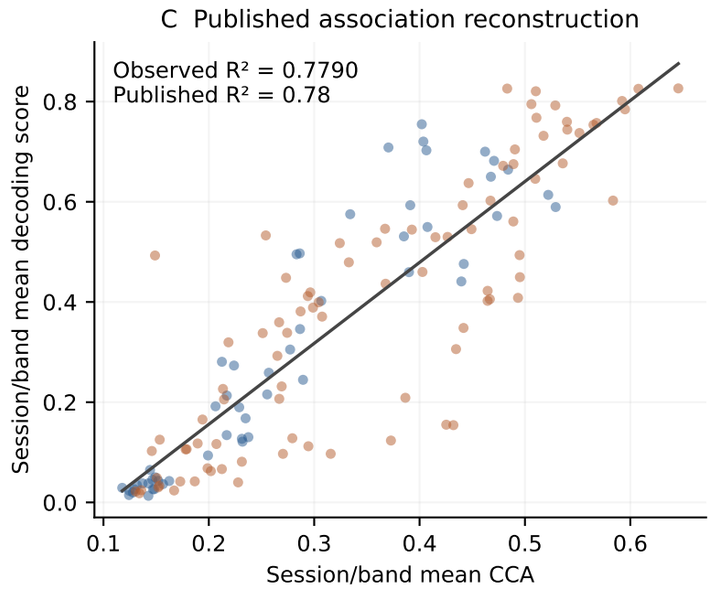
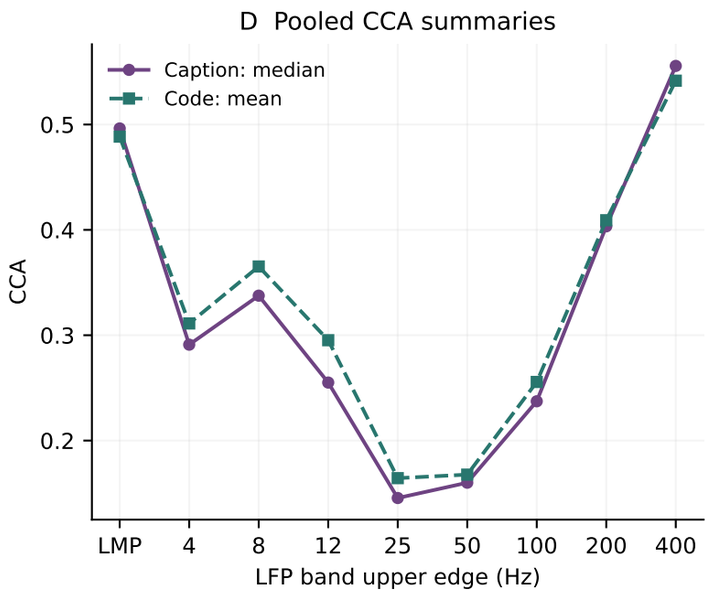
# EP05 · Fixed M1 publication benchmark

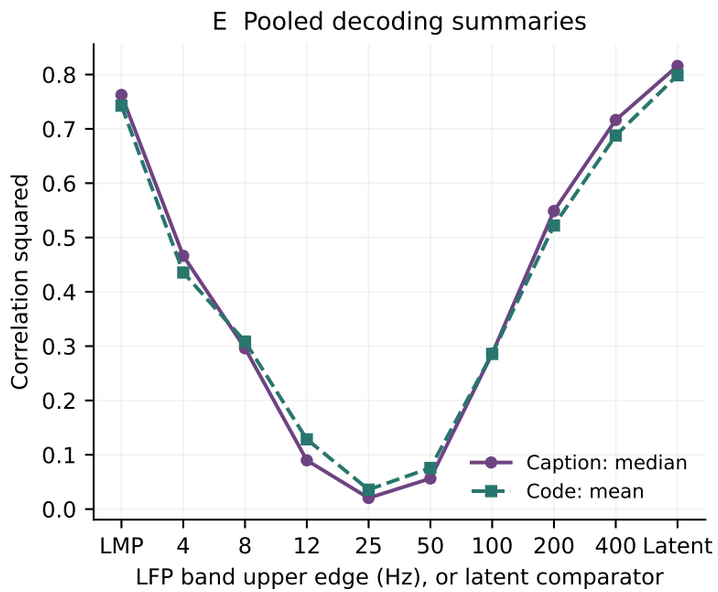
All eligible sessions retained · original reference semantics · source: benchmark_comparison.json











## F Evidence and limits

16 sessions from two animals
CCA values per band: 606 (paper: 606)
Decoding values per representation: 1600 (paper: 1,600)
Association points: 144 (paper: 144)

Thin curves: sessions; thick curves: animal means.
Dashed thin curves: Chewie's second implant.
Both implants belong to one animal.

Published descriptive statistics; no biological CI.
Original split draws are unavailable.
Benchmark reconstruction does not authorize search.
