EP08 · Acquired-feature mapping allocation falls behind both comparators

Mapping − balance: -0.006348 Q · Mapping − mean-value: -0.006783 Q · development only

All 20 cells retained: 8/16/32/96 electrodes × 32/48/64/80/96 trials. Fixed scarce-electrode repetitions are averaged first.

Animal profiles average electrodes and all four orders. Initial32/final96 fits are shared; their contrasts remain zero. No confidence intervals.

Common initializer normalization and equal acquired observations at each E,n. This tests one heuristic; four held sessions remain closed.
