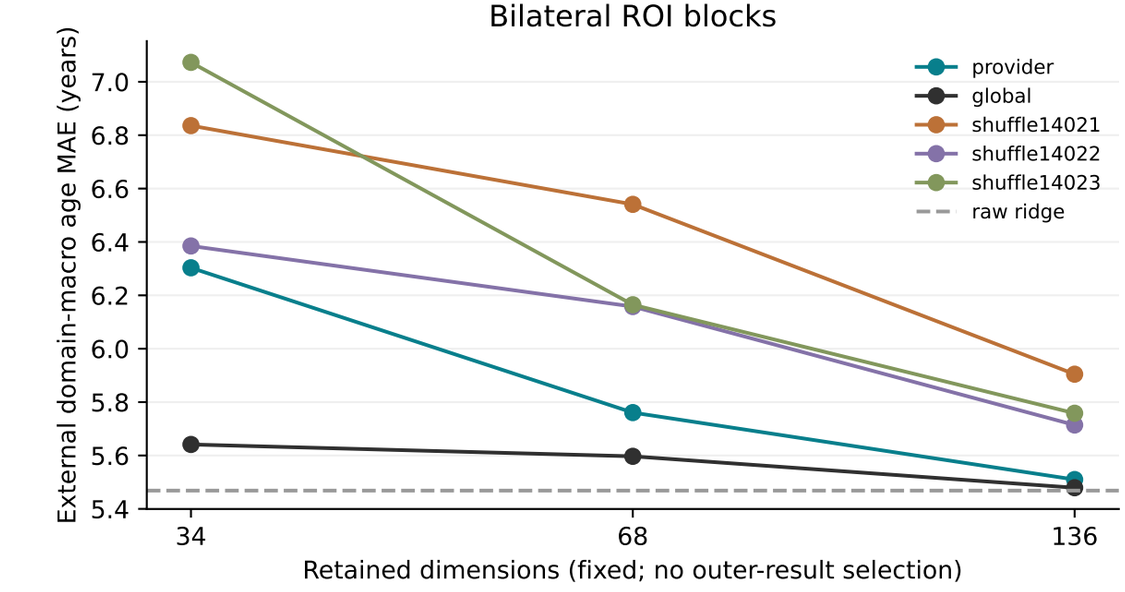
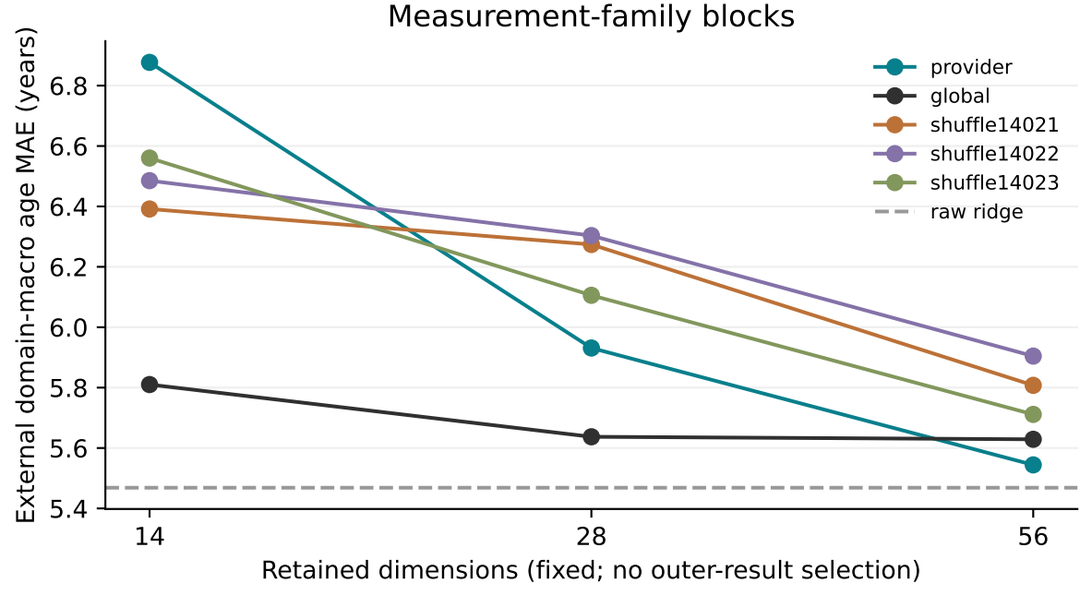
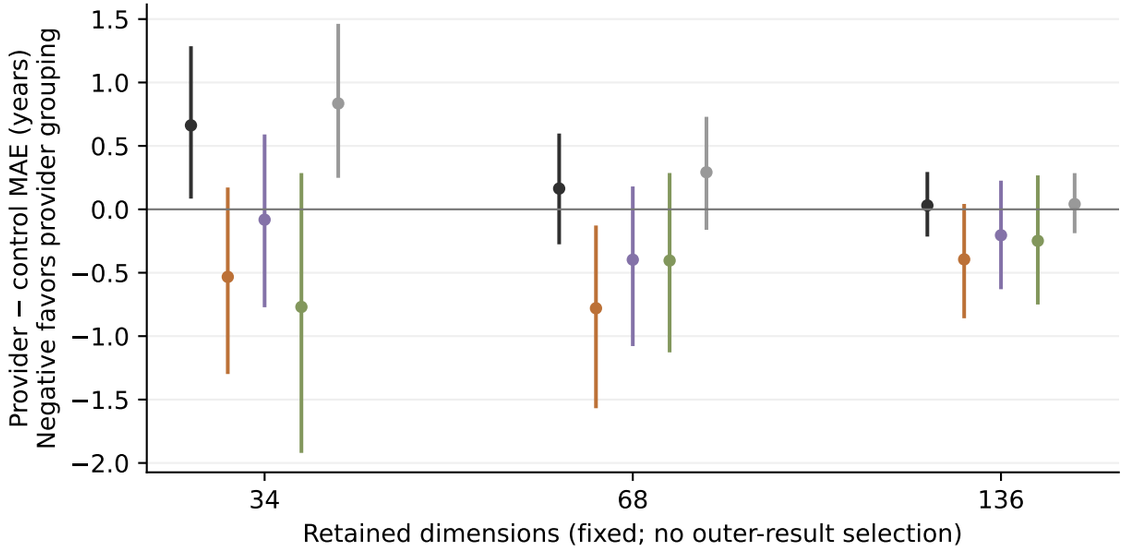
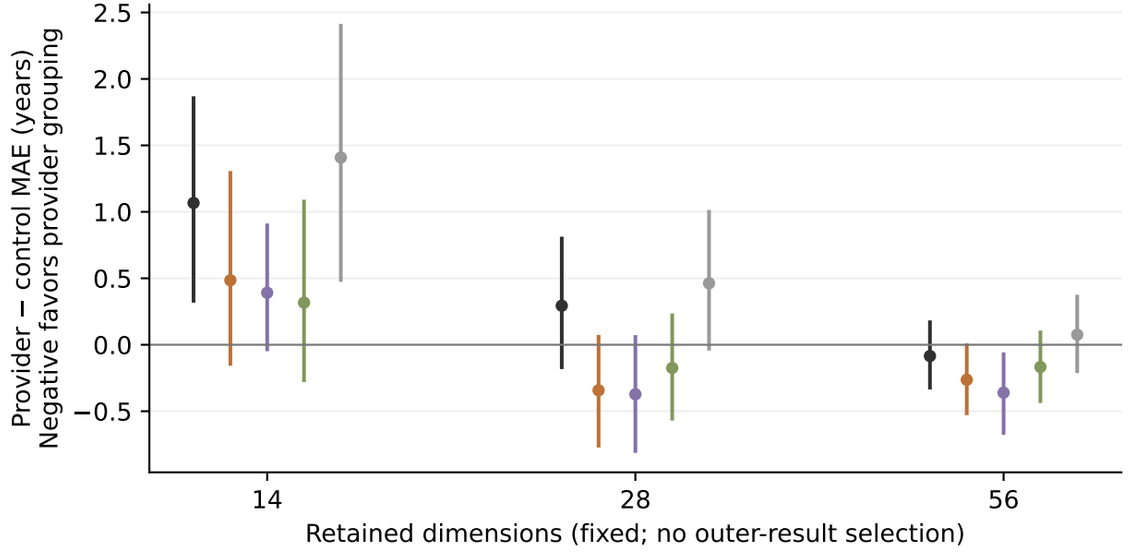
EP14 · Provider grouping versus generic compression
Exposed development; all three overlapping RAMP views









Bottom bars: 95% descriptive intervals from 10,000 paired domain/participant resamples; uncorrected.
No whitening or post-PCA rescaling; seven ridge penalties per fixed arm. All shuffles and dimensions retained.
See full report for every domain, participant-average, worst-domain, age-quartile and site-probe result. Validation remains closed.
